A trajectory is a route plus a time profile

01 Plan a road

Network, start, class

Sample permitted lane successors.

02 Generate motion

Path-conditioned diffusion

Denoise 511 forward distance increments.

03 Export coordinates

SUMO metres and seconds

Decode 512 positions at 0.25 s intervals.

Optional class feedback

Decode candidates, map their ordered positions to Hilbert images and score the target class.

A shared candidate budget isolates the effect of scoring. Held-out motion measures its value.
